

Lithofin KF Grout Protector

Description

A special product from the LITHOFIN range for ceramics, tiles (KF) and sanitary areas. The ready-to-use special impregnation is water-based and contains high-quality water- and oil-repellent active ingredients.

Properties

Due to its thin viscosity, Lithofin KF Grout Protector penetrates porous surfaces well. After drying, the remaining active ingredients provide good water repellency and excellent oil repellency. Stain-causing oils and similar substances remain on the surface, where they can be wiped off before a stain forms. Greasy kitchen dirt is easier to remove. The appearance of the surface is not changed, but slight darkening of the color is possible; no shine is produced.

Specifications:

Density: approx. 1.0 g/cm³

pH value: approx. 4.5

Appearance: clear, colorless

Odour: non-specific

Scope

For easy maintenance of absorbent, porous cement joints, especially in kitchens and sanitary areas. Absorbent, unglazed tiles can also be impregnated.

Processing

The substrate must be receptive, clean and free of grease. Thorough cleaning can be done with Lithofin KF Grout Cleaner. Then create a small sample area. Apply Lithofin KF Grout Protector undiluted to the dry surface with a brush or roller and allow to absorb. Apply several times to highly absorbent cement joints if necessary.

After about 20 minutes, before drying, carefully and completely wipe off any excess liquid that is still present.

Please note: Protect glass, porcelain, polished and lacquered surfaces, plastics and other sensitive surfaces or objects, or wipe them off immediately with a damp cloth. Product visible on the surface must not dry. Wipe thoroughly. We recommend testing in an inconspicuous area beforehand.

Drying time: approx. 2 hours. The full effectiveness of the impregnation occurs after about 24 hours. During this time, protect the surface from water, oil or similar.

Coverage: For cement joints approx. 10 m²/litre.

Storage

Frost-free, cool, sealed. Can be stored for up to approx. 2 years.

Environmental protection

The surfactants are biodegradable in accordance with Regulation (EC) No. 648/2004 (detergents regulation). Disposal: The container is made of environmentally friendly polyethylene (PE) and is recyclable. Rinsed containers can be disposed of via recyclable material collection systems (see note on label).

For information on labelling, transport and disposal, please refer to the safety data sheet.

Packaging

a) 500 ml bottle with child-proof cap (10 per box)

Please note that the environmental and safety information applies to the (concentrated) product in delivery form. If dilution is appropriate for the application, the classification may change.

This information can and should only provide non-binding advice.

The use of the products must be adapted to the local conditions and the surfaces to be treated. If there is no experience and in all cases of doubt, the product should be tried out in an inconspicuous place beforehand. (AUS-NZ2.26/9.25)
