

## Lithofin KF Cement Residue Remover

### Description

A special product from the LITHOFIN range for ceramics and tiles (KF).

Lithofin KF Cement Residue Remover is a concentrated cleaner that contains a mixture of special acids and supporting active ingredients. It is highly effective and can be rinsed off with water without leaving any residue. It is particularly low in odour and does not develop corrosive fumes.

### Properties

Lithofin KF Cement Residue Remover dissolves grout veils, flex joint residues, cementitious cement residues, light mortar residues, many efflorescences as well as rust and limescale deposits, so that they can be absorbed together with the cleaning fluid or rinsed off without leaving any residue.

#### Technical Data:

Density: approx. 1.1 g/cm<sup>3</sup> pH value: <1 (concentrate)

Appearance: clear, orange-red

Smell: fruity-sour

Solubility in water: very good

### Scope

For cleaning after installation indoors and outdoors. The surfaces become haze-free and show their natural colour structure. Ideal for indoor use because of the mild smell.

**Substrates:** Acid-resistant ceramic wall and floor tiles, clinker tiles, coarse ceramics, porcelain stoneware, brick, clay and terracotta coverings.

**Note:** The complete removal of even invisible grout residues is a prerequisite for pavements that are easy to maintain.

### Application

Dilute Lithofin KF Cement Residue Remover approx. 1:4 depending on the thickness of the cement veil, apply to the pre-wetted surface with a scrubbing brush or mop and spread. Wipe over several times and distribute evenly over the surface. After about 10 minutes, brush through and rinse well with water. Peel off larger areas with a rubber slider.

If necessary, treat stubborn areas with undiluted product or repeat the process. In the case of purely cementitious veils, dilution can be carried out up to 1:15.

**Note:** For very heavy and stubborn soiling, we recommend Lithofin CEMENT-AWAY.

**Please note:** Do not use on acid-sensitive surfaces such as enamel, zinc, anodised, marble, limestone, certain (decorative) tiles, wood, etc. Protect adjacent areas. Wash off splashes. In case of doubt or if no experience is available, try it out in an inconspicuous place.

**Coverage:** approx. 20 to 30 m<sup>2</sup>/litre depending on the type and severity of the soiling.

### Storage

Sealed, cool, can be stored for about 4 years.

### Environmental protection

The surfactants are biodegradable in accordance with Regulation (EC) No. 648/2004 (detergents regulation).

**Disposal:** The container is made of environmentally friendly polyethylene (PE) and is recyclable. Rinsed containers can be disposed of via the recyclable material collection system (see note on label).

For information on labelling, transport and disposal, please refer to the safety data sheet.

### Packaging

- a) 1 litre bottle with child-proof cap (10 per box)
- b) 5 litre canister (2 per box)

Please note that the environmental and safety information applies to the (concentrated) product in delivery form. If dilution is appropriate for the application, the classification may change. This information can and should only provide non-binding advice. The use of the products must be adapted to the local conditions and the surfaces to be treated. If there is no experience and in all cases of doubt, the product should be tried out in an inconspicuous place beforehand. (EN11.25/9.25)
