

Lithofin TC Classic Primer

Description

A special product from the Lithofin program for Cotto (method 2 – classic). It is a ready-to-use primer and contains silicone and acrylic resins dissolved in organic solvents.

Properties

Penetrates absorbent surfaces well and reduces or equalizes their absorbency. The maron stain also causes a medium to reddish-brown colouring of the cotto plate. It makes it water-repellent and is the prerequisite for an even final treatment with Lithofin TC Classic Wax.

Specifications:

Density: Approx. 0.8 g/cm³

pH value: n.a.

Flash point: Approx. 37°C (c.C.)

Appearance: Clear, colourless liquid (natural) or brown, slightly cloudy liquid (maron)

Smell: Aromatic

Solubility in water: Not soluble

Scope

For priming absorbent terracotta coverings, especially Italian (Florentine) cotto. This primer is the first step and the prerequisite for a good result in the final treatment with Lithofin TC Classic Wax (method 2-classic).

This method is not suitable for non-absorbent surfaces or outdoors.

For Spanish and French terracotta varieties, only Lithofin stain -natural- is recommended.

Processing

The surface must be completely dried out, stain-free and clean. Shake or stir the container well before use. Create a sample area in an inconspicuous place beforehand. Apply undiluted evenly with a brush or surface brush and spread so that no puddles or drips remain.

Please note: Before drying, rub off all unevenness with a cloth or pad. Immediately after absorption or drying (20 to 60 minutes), start applying Lithofin TC Classic Wax.

The temperature of the surface and the product should not be below 10°C and not above 30°C (switch off or reduce underfloor heating if necessary).

Note: This work should only be carried out after the silicone joints have been installed.

Drying time: Approx. 60 min. (at room temperature).

Coverage: Approx. 5 to 10 m²/litre depending on the absorbency of the substrate.

Storage

Cool, dry and sealed, can be stored for up to approx. 2 years. Use up the opening containers as soon as possible.

Further

With Lithofin TC Classic Wax. Both products belong together and form the Cotto treatment method 2 – classic.

Environmental protection

Contains solvents, free of chlorinated hydrocarbons. Do not allow to get into the wastewater.

Disposal: Container is made of environmentally friendly tinfoil and can be recycled. Dry, empty containers can be disposed of via recyclable material collection systems (see note on label).

For information on labelling, transport and disposal, please refer to the safety data sheet.

Packaging

a) 1 litre bottle with child-proof cap (10 per box)

b) 5 litre canister (2 per box)

Please note that the environmental and safety information applies to the (concentrated) product in delivery form. If dilution is appropriate for the application, the classification may change.

This information can and should only provide non-binding advice.

The use of the products must be adapted to the local conditions and the surfaces to be treated. If there is no experience and in all cases of doubt, the product should be tried out in an inconspicuous place beforehand. (EN11.25/9.25)
